

DeLaval cow mat RM21S

The comfortable choice

Encourage healthy activity

When a cow lies down, she puts nearly two thirds of her bodyweight on her front knees, which drop freely to the floor from a height of 25–30 cm (10–12 inches). This impact is very painful on hard surfaces, so much so that the cow may not lie down enough to rest, ruminate and maintain good health.

DeLaval cow mat RM21S is designed to eliminate this problem. This rubber cow mat for tied-up barns absorbs the shock from lying down, securing comfortable conditions for cows to stand and lie down painlessly. With this rubber mat cows can rise up easily after resting in comfort: rise, eat, and drink enough to produce large quantities of high quality milk.

Promote productivity

Everyone recognizes the importance of providing dairy cows with plenty of fresh water and a well-balanced diet. Yet the care and costs of correct nutrition can be wasted if your cows are unable to make effective use of it. DeLaval cow mat RM21S will help to ensure that they do.

True cow comfort

Tied-up barns put extra pressure on cow mats. DeLaval cow mat RM21S is extra tough and offers a high level of comfort, protection and hygiene.

It's easy to see what makes this mat so special. A 21 mm (3/4") thick mat produced from high quality rubber, including 1/3 virgin rubber for extra comfort and softness. Underneath, a multitude of cone-shaped studs improve

comfort by optimally absorbing shock. This improves leg health, protects the knees and encourages natural cow activities.

A built-in slope at the back of the mat and a patent-protected top surface provide good drainage. This design keeps the durable mat dryer and easy to clean. The anti-slip structure minimizes stress, slips and teat injuries while providing a high level of comfort for people too.

Easy to install

DeLaval cow mat RM21S has three pre-drilled depression holes in the front for easy installation, using the mounting plugs. This makes installation simple and ensures that there are no sharp edges to hurt the cow when lying down or standing up. Using this mat also enables you to save time and money on bedding because it minimizes the amount needed.

DATA

Thickness: 21 mm (3/4")

Material: High quality rubber with 1/3 virgin rubber

Mat sizes: We have a large number of different sizes that fits both young stock and cows.

For details on specific sizes, please contact your local DeLaval dealer.
