

DeLaval mini swinging brush MSB

Give your calves a healthy start

Healthy calves make healthy heifers

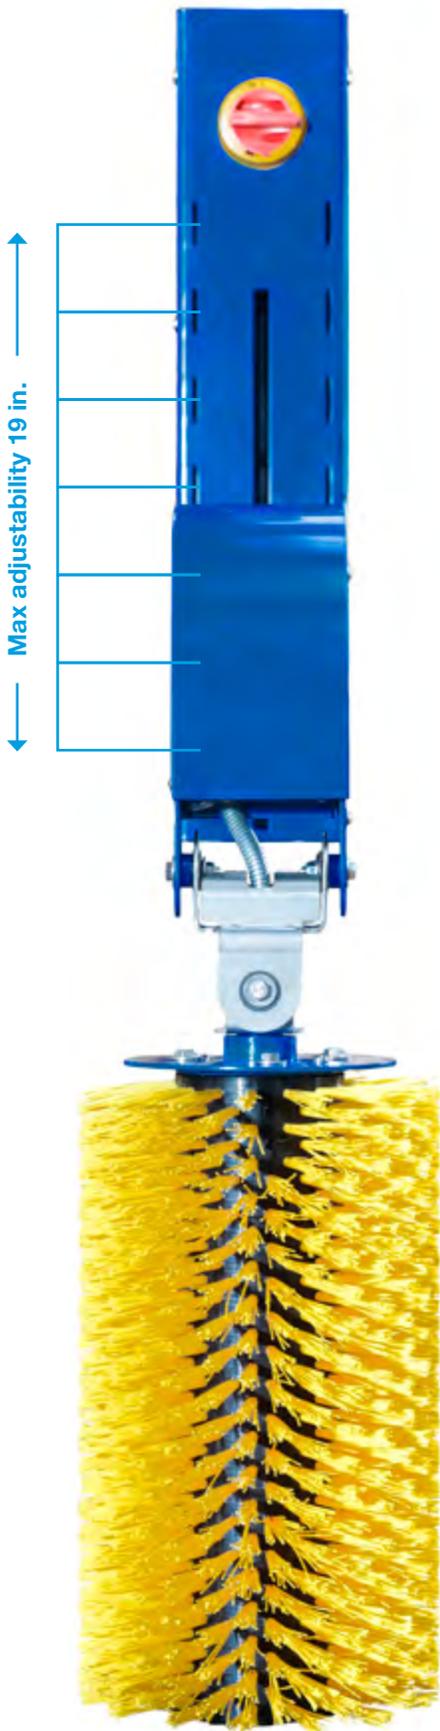

The DeLaval mini swinging brush MSB allows calves to enjoy the same daily grooming benefits as the 4 million dairy cows worldwide that benefit from the original SCB.

MSB Benefits:

- Gives calves a good start for future performance
- Promotes healthy growth and development
- Skin health is increased through improved cleanliness and removal of dirt and debris
- Calves are more comfortable as a result of being clean
- Promotes social behavior among calves

Calm, clean and healthy calves

You have invested in premium genetics, now ensure the future health and productivity of your calves. The MSB promotes healthy development of dairy cows and is suitable for goats. It is always ready for use so calves are free to enjoy its benefits throughout the day. Use of the MSB can improve blood circulation and hide health which increases overall well being and reduces the risk of skin disease.

Smooth operator

When an animal moves against the MSB, a patented brush sensor initiates a gentle speed which is quickly stopped if there is resistance. It also stops if the animal walks away, saving energy. The swinging arm of the brush allows the animal to choose the area of their body to groom. Calves using the brush rely less on grooming themselves on posts and barn components.

Grow with the herd

The MSB is adjustable for a variety of conditions including bedding thickness and herd growth. As the calf grows, the height can be adjusted to accommodate it from the ages of 3 to 12 months.

Designed for tough environments

The MSB is designed to mount to a post or wall. The outer housing is made from strong, durable materials and is designed to withstand tough barn environments. The nylon brush bristles are made from a durable material, providing the optimal level of comfort for calves while cleaning their coats and stimulating blood circulation.
